Quiz Funnel Development SOP

Pixel-Perfect Competitor Quiz Replication

This SOP explains how to **analyze, replicate, build, and QA a competitor quiz funnel**.

Goal

Create a **pixel-close, behavior-identical quiz funnel** that matches the competitor in:

- design
- flow
- animations
- functionality
- performance

Quiz must be completed within **1–2 days maximum**.

Builders are expected to **use AI coding agents**, but must **follow this checklist carefully** and validate every detail manually.

The final quiz must be:

- Pixel close
- Fully functional
- Fully tested across all paths
- Optimized for mobile
- Easily reusable for other quizzes

---

1. Competitor Funnel Capture Protocol (MANDATORY)

Before building anything, fully capture the competitor funnel.

Record the Entire Funnel

Create full recordings of the funnel flow.

Checklist:

⬜ Open funnel in **Incognito mode**
⬜ Record full journey with **Loom**
⬜ Record **desktop version**
⬜ Record **mobile version**
⬜ Record **slow interactions**
⬜ Record **fast interactions**

Capture the following behaviors:

- every click
- hover effects
- animations
- transitions
- delays
- loading screens
- input validation
- auto-advance behaviors
- progress bar updates
- page refresh behavior

Required Deliverables

Competitor_Funnel_Recording_Desktop.mp4
Competitor_Funnel_Recording_Mobile.mp4

---

2. Visual Asset Extraction

All visual assets must be extracted from the competitor funnel.

Images

For every image document:

- image name
- resolution
- file type

- aspect ratio
- position on page
- background behavior
- animation behavior

Example:

hero-woman-running.png
1080x1080
center aligned
fade-in animation

Checklist:

⬜ Download hero images
⬜ Download quiz option images
⬜ Download icons
⬜ Download background images
⬜ Download logos
⬜ Download loading graphics
⬜ Download result page graphics

Tools:

- Chrome DevTools
- Image Downloader extension

Fonts

Document:

- font family
- font weight
- font size
- letter spacing
- line height

Example:

Font: Inter
Weight: 600
Size: 28px
Line height: 34px

Checklist:

⬜ Headline font
⬜ Body font
⬜ Button font
⬜ Quiz option font

Colors

Extract the full color palette.

Checklist:

⬜ Primary color
⬜ Button color
⬜ Button hover color
⬜ Background color
⬜ Progress bar color
⬜ Input border colors
⬜ Error colors

Example:

Primary: #FF6A3D
Button hover: #E85C30
Background: #F8F8F8

---

3. Quiz Structure Documentation (CRITICAL)

Document the full quiz structure.

Create a **step map**.

Example:

Step 1 – Welcome
Step 2 – Gender selection
Step 3 – Age input

Step 4 – Height input
Step 5 – Weight input
Step 6 – Activity level
Step 7 – Goal
Step 8 – Email capture
Step 9 – Loading screen
Step 10 – Results
Step 11 – Offer page

Checklist:

⬜ Count exact number of steps
⬜ Name every step
⬜ Screenshot each step
⬜ Document if step auto-advances
⬜ Document if step has validation

Deliverable:

quiz_step_map.md

---

4. Interaction Behavior Documentation

Document all interaction behaviors.

Button Behavior

Checklist:

⬜ hover animation
⬜ click animation
⬜ color change
⬜ scale effect

Example:

hover: scale 1.02
click: scale 0.98

Answer Selection Behavior

Document:

- single select
- multi select
- auto advance
- next button requirement

Example:

Step 3 auto-advances after selection.

---

5. Animation Documentation

Animations must be documented carefully.

Use **Chrome DevTools performance throttling** if needed.

Page Animations

Checklist:

⬜ fade in
⬜ slide up
⬜ zoom
⬜ bounce

Example:

Quiz options fade in after **300ms delay**.

Step Transitions

Document transition type:

- slide left
- fade
- instant

Example:

Step transition = **slide left 200ms**

---

6. Progress Bar Behavior

Progress bars must match the competitor exactly.

Checklist:

⬜ progress increments
⬜ percentage display
⬜ step numbers
⬜ animated progress

Example:

Step 1 = 10%
Step 2 = 20%
Step 3 = 35%

---

7. Input Behavior (VERY IMPORTANT)

For all inputs document:

- height
- weight
- age
- email
- numeric fields

Input Rules

Document:

- allowed values
- validation rules
- formatting

- units

Example:

Weight input

Range: 30–200
Unit: kg
Numbers only

Input Reactions

Example:

User enters **70kg**

Auto-advance after **1 second**

Checklist:

⬜ auto advance
⬜ validation error
⬜ error message
⬜ input mask
⬜ numeric keyboard on mobile

---

8. Branching Logic Mapping (MOST IMPORTANT)

Map **every possible quiz path**.

Example:

Male → Path A
Female → Path B

Goal → result mapping:

Weight loss → Result A
Muscle gain → Result B

Deliverable:

quiz_branch_map.miro

Checklist:

⬜ map all answer branches
⬜ map result outcomes
⬜ map conditional questions

---

9. Step Preloading (Performance Requirement)

Images must be preloaded to prevent loading delays.

Rule

Images for the **next 2 quiz steps must be preloaded**.

Example:

If user is on Step 3:

Preload:

Step 4 images
Step 5 images

Preload Targets

⬜ step images
⬜ answer images
⬜ background images
⬜ result page images

Do NOT preload:

❌ entire funnel images
❌ sales page video assets

Performance Standard

Step transition target:

<100ms perceived load time

---

10. Mobile Browser Status Bar Color

Mobile browser status bar must match page design.

Browsers:

- iOS Safari
- Chrome Android
- Samsung Browser

Example implementation:

<meta name="theme-color" content="#FFFFFF">

Checklist:

⬜ status bar matches page background
⬜ no flashing color changes
⬜ dark pages use dark bar
⬜ light pages use light bar

QA:

⬜ test on iOS Safari
⬜ test on Chrome Android

---

11. State Persistence System

The quiz must remember user progress.

Step Persistence

If user refreshes:

User returns to the **same step**.

Persistence duration:

3 minutes

Implementation:

localStorage

Offer Page Persistence

If user reaches offer page:

User must remain on **offer page for 12 hours** if refreshed.

Example:

offer_seen = true
expiration = 12h

Checklist:

⬜ step persists after refresh
⬜ offer page persists 12h

---

12. Loading Screen Behavior

Loading screens must match the competitor.

Checklist:

⬜ loading duration
⬜ text changes
⬜ progress animation
⬜ step messages

Example:

Analyzing your answers…

Step 1: calculating metabolism
Step 2: building plan

---

13. Offer Page System

Each quiz must include **3 offer pages**.

Base Offer

Example:

61% discount

URL:

quiz.com/en/offer

Second Offer Page

Example:

68% discount

URL:

quiz.com/en/offer-68

Third Offer Page

Example:

75% discount

URL:

quiz.com/en/offer-75

Checklist:

⬜ each offer has unique URL
⬜ pricing matches discount
⬜ tracking parameters preserved

---

14. Multilingual Architecture (MANDATORY)

Prompt for the Agent Translation task
https://www.notion.so/PMC-translation-prompt-22b978a7769e80489af9cb63a7dd1b57

Quiz must support multiple languages.

Supported languages: EN, LT, TW, CZ, LV, IL, RU, HU, GR, HR, DK, SK, RO, JP

URL Structure

quiz.com/en/quiz/1
quiz.com/lt/quiz/1
quiz.com/cz/quiz/1

Translation Structure

/locales/en
/locales/lt
/locales/ru

Files:

quiz.json
offer.json
results.json

Rules

⬜ no hardcoded text
⬜ all text from translation files

QA:

⬜ language switching works
⬜ correct locale route

---

15. Clean Code Standard

Code must be clean and maintainable.

Forbidden:

❌ unused components
❌ unused pages
❌ unused CSS
❌ unused JavaScript

Required:

⬜ remove unused imports
⬜ remove unused assets
⬜ remove unused routes

Recommended Structure

/quiz
/components
/steps
/assets
/locales
/utils

---

16. Reusable Quiz Infrastructure

Quiz must support **rapid replication**.

Architecture must be **config-based**.

Example configs:

quizConfig.json
designConfig.json
offerConfig.json

Configs contain:

- steps
- questions
- answers
- branching logic
- design styles
- offer details

Builders should change:

config files only

Not core code.

---

17. Complete Path Testing (CRITICAL)

Every possible quiz path must be tested.

Example paths:

Male → weight loss → beginner
Male → muscle gain → advanced
Female → weight loss → beginner
Female → muscle gain → advanced

Deliverable:

path_testing_log.md

Must include:

- path
- result page
- offer page

---

18. Cross Device Testing

Test layouts on:

⬜ Desktop
⬜ Mobile
⬜ Tablet

Viewports:

375px
768px
1440px

---

19. Pixel Perfect Layout Check

Layout must match competitor.

Checklist:

⬜ margins match
⬜ paddings match
⬜ button sizes match
⬜ image proportions match

Allowed difference:

±2px

---

20. AI Agent Prompting Standard

Builders must give structured prompts to AI coding agents.

Example:

Recreate this quiz step.

Requirements:

- 2 answer options
- image above text
- fade-in animation 300ms
- auto advance after click
- button scale animation

Include:

- screenshots
- step documentation
- animation notes

---

21. Supervisor Escalation Protocol

If anything is unclear → **ask supervisor immediately.**

Ask when:

⬜ branching logic unclear
⬜ animation unclear

⬜ validation unclear
⬜ assets missing
⬜ translations missing

Question format must include:

- screenshot
- step number
- problem description
- suggested solution

Never guess.

---

22. Final QA Checklist

Before submission verify:

⬜ all steps match competitor
⬜ animations match
⬜ images match
⬜ branching works
⬜ inputs validated
⬜ refresh resumes step
⬜ offer persists 12h
⬜ mobile layout correct
⬜ images preloaded
⬜ mobile status bar color correct
⬜ all translations work
⬜ all paths tested

---

23. Deliverables

Builder must submit:

competitor_analysis.md
quiz_step_map.md
quiz_branch_map.miro
visual_assets_folder

path_testing_log.md
translation_files
Final_quiz_url (Hosted on **Vercel**)
GitHub repository link

Pixel Copy Standard

Final rule:

If someone looks at both quizzes **side-by-side**, they should **not immediately see the difference**.

Builders must match:

- layout
- spacing
- animations
- behavior
- flow

Final Builder Rule

If something is unclear or something is missing in order for you to complete your task in high quality standard:

ASK.

Do not guess and leave it half completed.

Improvement Suggestion Rule

If you see how we can **improve this SOP to make it easier and clearer to follow**, provide suggestions to the supervisor.

Suggestions must include:

- problem
- proposed improvement
- example implementation.

Notables:

Pricing section: make sure you copy this pattern **as close as possible,** here are the examples:
